

Hello, new Fredbear employee. And welcome to the mascot costume assembly training tape. There are 2 types of suits. Fredbear, and Spring Bonnie. These suits double as both animatronic suits and wearable costumes for performers. This method is both cost-efficient and eliminates any differences in appearance as to not break the immersion. The wearable costumes will only be used when an animatronic is in repair. The suit is made up of three layers. The first layer is a fabric costume that we normally see. The second layer is a fiberglass shell that forms the structure of the character. The third layer is the exoskeleton. This layer is the closest to your body when being worn. It will help support all the weight of the heavy components. And is responsible for holding all the spring-locks. Spring-locks are the locks that hold all the springs used to attach to the animatronic. This ensures that this suit does not fall off while the animatronic is performing. However, these springs could be very dangerous if the suit is not prepped carefully. Now, let's begin the training. To prep the costume into suit mode, we shall start by winding up all the spring-locks with a hand crank. Insert the hand crank into the lock sockets located behind the animatronic. There are 10 sockets in total. Two on each limb, one on the back of the body, and one behind the head. Next, remove the gloves and feet. You'll need to remove the head before taking off the costume. Simply remove the head, as well as a fiberglass structure underneath. Then, peel off the fabric costume. Once removed, you'll need to detach the fiberglass shell from the exoskeleton. Lastly, remove the exoskeleton from the animatronic. To put on the suit, begin by sliding into the exoskeleton. Be sure not to rush up against the spring-locks too much. Next, you'll need to reattach the fiberglass shell back on. Then, put on the fabric layer. Once applied properly, put on the gloves and

feet. Lastly, you'll need to put on the head. But before you do, you'll need to put the head into performer mode by winding up a small socket on the inside of the head to reveal the fake eyes. Perfect for children, and perfect for you to see. In the event of a spring-lock failure, do not panic. Keep as still as possible, and call for help. Calm your breathing, and have a partner wound up the hand crank to lock the spring-locks once more. Then safely and gently, remove the suit.
